

## Personal Protective Equipment for Fentanyl Response

Fentanyl, the relatively new and extremely deadly drug, has flooded the market and is posing a serious problem not only for the people struggling with poly-substance abuse and addiction but also for first responders and other professionals who are at risk when assisting Fentanyl crises situations.

People who are at the highest risk of accidental exposure to fentanyl include anyone who may come in direct contact with those known or suspected to be under the influence of fentanyl and/or have the drug on their person. Such high-risk personnel includes first responders (firefighters, police officers, EMTs), nurses, doctors, technicians, therapists, phlebotomists, and pharmacists. People without direct patient contact may be at risk for indirect exposure given the possible nature of cross-contamination and exposure within the clinical setting. This includes dietary, environmental services, laundry, security, engineering and facilities management, administrative, and volunteer personnel.

### Common methods of accidental and potentially fatal Fentanyl exposure :

- Inhalation
- Ingestion
- Direct contact with mucous membranes
- Accidental needle sticks (skin breaks)

International Enviroguard is the industry's go-to supplier after a crisis. Our expertise in assessing protective needs and then rapidly delivering has kept essential teams safe after floods, hurricane cleanups, oil spills and highly contagious infectious disease outbreaks. Our ability to quickly identify and offer the best protection for the job extends beyond our disaster-response work to our entire operation.

### Are you concerned about the possible exposure to Fentanyl and Fentanyl analogs such as Carfentanil?

Our disposable PPE can provide the necessary body, wrist, and arm protection as well as protection against contamination of an employee's clothing.

**Comfortable, Reliable Protection for Those Who Help and Heal**

Choosing the right disposable clothing against harmful Fentanyl exposure is an important decision. International Enviroguard provides high-quality protection products while adding worker-tested, Comfortable Confidence®.

**GOOD—STRONG**

**BETTER—HEAVIER, STRONGER**

**BEST—SUPERIOR HOLDOUT**

**BLOOD/BLOOD-BOURNE PATHOGEN PROTECTION**

**ViroGuard**

Passes ASTM F1670 and F1671 for blood and bloodborne pathogens. Durable finish. Tested for several industrial chemicals.

**ViroGuard® 1**

Passes ASTM F1670 and F1671 for blood and blood-borne pathogens. Taped seams. Thumb loops. Large zipper pull for ease of use. Durable finish for superior abrasion resistance.

**ViroGuard® 2**

Fabric and seams pass ASTM F1670 and F1671 for blood and blood-borne pathogens. Key features built in for donning & doffing ease. Designed by healthcare workers.

**CHEMICAL PROTECTION**

**ChemSplash® 1**

Unique hybrid membrane allows sweat and moisture vapor to escape to keep worker cool while keeping out many toxic chemicals. Available with serged or taped seams.

**ChemSplash® 2**

Excellent alternative to Saranex™. Lighter, more pliable fabric gives superior worker comfort when dealing with aggressive chemicals, acids and caustics. Taped seams for added protection.

**FIRE AND CHEMICAL PROTECTION**

Visit [int-enviroguard.com](http://int-enviroguard.com) for all garment options including sizes, back, cuff, and seam styles, closure and collar/hood types, fabric colors, price ranges, and accessories.

**PyroGuard CRFR™**

Extends the life of the primary FR garments by protecting them from a broad array of aggressive chemicals. Taped seams for added protection.
